

Change Customer Password In Admin

1. How Does It Work?

Overview: Add a quick update Password button to customer view in Admin.

The screenshot displays the 'CUSTOMER INFORMATION' page in the Magento Admin. On the left is a sidebar menu with options: Customer View, Account Information, Addresses, Orders, Shopping cart, Newsletter, Billing Agreements, Product Reviews, and Wish List. The main content area is titled 'Personal Information' and contains several data rows: 'Last Logged In:' (Aug 20, 2024, 8:46:13 AM (Online)), 'Account Lock:' (Unlocked), 'Confirmed email:' (Confirmation Not Required), 'Account Created:' (Aug 20, 2024, 8:46:12 AM), 'Account Created in:' (Default Store View), and 'Customer Group:' (General). To the right of these rows is a 'Default Billing Address' section stating 'The customer does not have default billing address.' Below the 'Personal Information' section is a 'Change Password' section with a text input field labeled 'Enter Password' and an orange 'Update Password' button.

Command Line Usage also:

- `bin/magento customer:change-password test@example.com password123`
- If customer accounts are not shared between websites, a website code has to be specified with the `--website` or `-w` option:

`bin/magento customer:change-password --website base test@example.com password123`
